

Make a Better Sundeck!

Welcome to the one site that can lay out everything you need to get the most durable coating on your sundeck!

- Looking for instructions? We have them.

- Looking for a DVD? We have it.

- Looking for a contractor to do it for you? We have those links too!

So, why would you want to cover your sundeck with Fiberglass? Here are the benefits:

- It is super durable
- It will last a long long time
- It is super easy to clean
- It can be repaired and refreshed
- You can do it yourself
- It costs less than a good quality vinyl.

What do we mean by super durable? How about a dog that likes to scratch? How about a careless cigarette? How about moving the patio furniture with the sharp metal legs? All these things can cause a tear in even the best vinyl sundeck.

What do we mean by last a long time? How about 35 years and going!

What do we mean by easy to clean? A scrub brush and 10 minutes will clean 100 square feet, even if it has been dirty for years.

What do we mean by repairable and refreshable? A fiberglass sundeck with a crack or other defect can be seamlessly repaired, and you have the option of re-coating the color coat any time to freshen the look.

What do we mean by do it yourself? With our literature, DVD, and seminars, plus the great advice of our staff, nearly anyone a little handy can start from bare plywood and finish with a fiberglass sun deck that will last for years.

What do we mean by lower cost than good vinyl? Well, we don't sell vinyl, but customers tell us that all the materials for a fiberglass sundeck cost less than a good 60 mil vinyl sold as a do-it-yourself product.
